

eScan Mobile Security for iPhones & iPads

It is an advanced security solution for iPhones, iPads and iPod Touch equipped with features to activate an alarm, or locate your iPhone or iPad on Map through online anti-theft portal. Using the online portal you can send alert message to the device or take photo of the user holding the device using the front camera. eScan Mobile Security for iPhone and iPad ensures safe online experience through its advanced Web Protection module that allows you to select website categories to be allowed or blocked in eScan browser. Additionally you can take backup of contacts or control privacy settings for your Facebook account. It also displays the status of Location services and advises for optimizing battery usage.

Features and Benefits

Anti-theft – Find your device on theft or loss

eScan Mobile Security for iPhones & iPads provides advanced anti-theft features for locating your device in case of theft or loss. You can remotely scream your device or send message to be displayed on the device to improve its chance of being returned. It also allows you to take Photo of the user holding your device, remotely through online anti-theft portal.

Safe Surfing - Ensuring safe online experience

It allows you to select website categories to be allowed or blocked in eScan browser. For example: You can block websites categories for Porn, Violence, Alcohol & Tobacco etc. and allow website categories for Education, Finance, Sports, and News etc.

Facebook Privacy - Protecting your privacy on Facebook

Configure your Facebook account and control privacy settings of the same. It detects privacy concern in your account and lets you define settings for those concerns, such as who can search you on Facebook using the phone number or email address that you provided.

QR Code Scanner – Scan and Detect Malware URL

Once the scanning is over, it displays the category of the scanned URL. If it comes under Malware category, then eScan will highlight it in red.

Note – eScan will not scan and Filter URL If the scanned QR code contains text along with the URL.

Privacy Advisor - Check Location Services status for the Apps

Your privacy can be at stake if some unwanted apps use the location services. Battery life can be optimized by allowing location access to limited apps. This module displays the status of Location Services.

Backup and Restore Contacts - One tap Backup and Restore

Allows you to take a backup of contacts from the device to the server and restore it to the device on a future date or time, also allows you to download the uploaded contact file in .vcf format from anti-theft portal to your computer that can later be restored to another device, if required .

Data Usage

Displays the data usage of your device be it Cellular Data or Wi-Fi Data between certain period of time. It also allows you to set alert on crossing the threshold limit. You can also define the billing cycle.
